EDUCATION

University of Houston – *B.S. in Computer Science*

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Software Design, Database Systems, Fundamentals of Software Engineering, Software Development Practices, Artificial Intelligence

EXPERIENCE

Moore Control Systems Inc

Houston, TX

IT intern

May 2023 - July 2024

- **Validated PLC system behavior during Factory Acceptance Testing (FAT)** by executing test procedures against technical specifications, improving system reliability before deployment.
- **Designed and maintained structured SQL databases** supporting internal engineering workflows, improving data accuracy and traceability across multiple projects.
- **Developed internal web pages using HTML/CSS** to support documentation and operational tools used by engineering teams.
- **Migrated large-scale datasets from legacy systems into M-Files** by designing structured data mappings, preserving audit trails and improving document management accessibility.

PROJECTS

Approval Workflow System – *Internal Application;*

January 2025 - May 2025

- **Developed a secure form approval platform used by University of Houston staff** by implementing Microsoft OAuth authentication through Cougar ID integration.
- **Built administrative dashboards enabling management of approvers, delegations, and submission workflows**, improving organizational approval transparency.
- **Implemented real-time reporting tools with advanced filtering by unit, status, and date**, improving operational visibility for administrators.

January 2026 - May 2026

Octane – *Performance Analytics & Dashboard Platform;*

- **Building a mobile-first analytics platform that converts sales and marketing data into real-time dashboards** by developing a layered backend API using C#, .NET 9, and dependency injection architecture.
- **Designed back-end services and REST API development using Entity Framework Core** to compute sales performance metrics.
- **Implemented role-based dashboards for sales reps, managers, and executives**, enabling performance visibility at individual, team, and organizational levels.
- **Improved code reliability by implementing automated unit tests with NUnit**, enforcing code coverage and static analysis using SonarCloud CI pipelines.
- **Integrated Swagger UI for API documentation and interactive endpoint testing**, accelerating development and debugging workflows.
- **Built scalable data access layers using Entity Framework Core**, supporting efficient metric aggregation and reporting queries.

SKILLS

Languages: C#, Python, JavaScript, SQL, C++, HTML/CSS, TypeScript, R

Fullstack: React, Next.js, .NET, Entity Framework Core, REST APIs

Databases & Data: SQL

Developer Tools & Platforms: VS Code, Visual Studio, Azure Cloud, JetBrains Rider, Sonarcloud, SwaggerUI, NUnit, Git

Documentation Tools: M-Files, LaTeX, Confluence, Jira, Microsoft Excel

LEADERSHIP EXPERIENCE AND ACTIVITIES

Houston Gamma Beta Fraternity (GB) – *Active Member;*

May 2022 - Present

- Participated in professional networking, technology discussions, and community service initiatives.
